Jupiter: The Ruthless One – Mars: The Doomed One – Sun: The Fiery One – Saturn: The Beautiful One – Pluto: The Mysterious One
We're living through an extraordinary time of exploration. A fleet of space probes are continually beaming data from their sensors back to Earth. Hidden in this stream of code are startling new discoveries about the worlds we share with the Sun. We will piece together these remarkable and often surprising findings to tell the greatest science story of them all – the life and times of the Solar System.

What emerges is a dramatic tale chronicling the adventures of eight planetary siblings. Born from violence, they grow up together, in time becoming living and breathing worlds, only to fade away one by one as they age. Along the way each world takes on its own unique character which we will come to know as we cross the vastness of space and time to visit them. We'll place our cameras on the surfaces of these worlds at moments of heightened drama. We'll give readers a glimpse of the most memorable moments in the evolution of our star system.

Along the way we will meet all eight of the major planets, plus a supporting cast of moons, asteroids and comets, and a mysterious as yet unseen world way out beyond the Kuiper belt!

The Nine Planets Solar System Tour Information about each planet and moon in our solar system with many pictures, discussion of the history of its discovery, exploration, and physical characteristics. In addition to the planets, there are also pages about the Sun, many moons, and asteroids, comets and meteorites. Planet - Wikipedia The idea of planets has evolved over its history, from the divine lights of antiquity to the earthly objects of the scientific age. The concept has expanded to include worlds not only in the Solar System, but in hundreds of other extrasolar systems. Solar System Planets: Order of the 8 (or 9) Planets | Space There used to be nine planets. Now there are eight, or maybe nine after all. Whichever you prefer, here is a list of them in the order they appear in the solar system.

Overview | Planets Solar System Exploration: NASA Science There are more planets than stars in our galaxy. We've discovered thousands of planets orbiting distant stars, but it all started with the worlds orbiting our star – the Sun. The current lineup includes eight planets.
